

## New Product

HUB 6 Lines | MBC06.431

### 💡 Description

A common connection point for different bus lines within a HDL Buspro Network. MBC06.431 has 6 ports to connect lines from different areas in your project. This product it does not have any software inside, there is just hardware with fast connections.

This module's aim is to avoid the old adaptor sockets between different bus segments and make easier the interconnections through one HUB device. It will simplify the way to set up an installation and add new lines to an existing project, as well as its maintenance and checking for the future.

### ⚙️ Technical Specifications
